

PROTEIN COMPLEMENTATION IN TRANSGENIC PLANTS

Abstract of the Disclosure

5 The invention relates to pairs of parent plants for
producing hybrid seeds and to methods for producing plants
with a desired phenotype. The desired phenotype is an
active enzyme, a regulatory protein or a protein which
affects the functionality and/or viability and/or
structural integrity of a cell. Preferably, the desired
10 phenotype is substantially absent from the parent
plants/lines. In particular, the invention relates to
parent plants and methods involving plant lines for
producing male-sterile plants and seeds.
